ABOUT

Power Of Publish is fully automated trading platform that gives you full control of your investments, and allows you to withdraw your capital and profit anytime. We were one of the first to invest in cryptocurrencies.

Power Of Publish is a legal leading blockchain investment company.

Our Mission:

Our mission is to act as a catalyst for universal adoption and blockchain innovation. We focus only on investing in blockchain technologies. Our team has experience in both traditional financing and emerging blockchain technology. In our bid to make the most of your money, you can choose between our services spanning from trading in the stock market to investing in natural resources such as oil and gas.

OUR SERVICES

- **CYPTOCURRENCY**
- **FOREX STOCK (CFD)**
- **OTHERS**

CRYPTOCURRENCY

WHAT ARE CRYPTOCURRENCIES?

A Cryptocurrency is a digital coin, designed to be transferred between individuals in virtual transactions. Cryptocurrencies exist only as a virtual data and not as physical objects.

Decentralized cryptocurrency is produced by the entire cryptocurrency system collectively at a rate which is defined when the system is created and which is publicly known. In centralized banking and economic systems such as the Federal Reserve System (FRS), corporate boards or governments control the supply by printing units of fiat money or demanding additions to digital banking ledgers.

“Owning a Bitcoin means you have the collective agreement of each and every computer on the Bitcoin network that it is currently owned by you and – more importantly – that it was legitimately created by a miner.”

A cryptocurrency, crypto currency or crypto is a digital asset designed to work as a medium of exchange wherein individual coin ownership records are stored in a ledger existing in a form of computerized database using strong cryptography to secure transaction records, to control the creation of additional coins, and to verify the transfer of coin ownership. It typically does not exist in physical form (like paper money) and is typically not issued by a central authority.

Cryptocurrencies typically use decentralized control as opposed to centralized digital currency and central banking systems. When a cryptocurrency is minted or created prior to issuance or issued by a single issuer, it is generally considered centralized. When implemented with decentralized control, each cryptocurrency works through distributed ledger technology, typically a blockchain, that serves as a public financial transaction database.

FOREX STOCK (CFD)

WHAT IS STOCK MARKET?

As the name suggests, the stock market is a marketplace for the trading of stocks or shares. There are many stock markets around the world, and the UK's main exchange is The London Stock Exchange (LSE).

To form a market index, company shares are grouped together, and their value is combined as a weighted average (the bigger the company the larger its effect on the value of the index) resulting in a figure. Generally, companies of similar size and value are grouped together. Often you hear the market being up or down. This relates to stock market indices rising and falling.

“If a company you hold shares in pays dividends, you'll receive dividend payments. If a company is successful and manages to grow profits over time, the amount it pays out as a dividend can increase.”

A cryptocurrency, crypto currency or crypto is a digital asset designed to work as a medium of exchange wherein individual coin ownership records are stored in a ledger existing in a form of computerized database using strong cryptography to secure transaction records, to control the creation of additional coins, and to verify the transfer of coin ownership. It typically does not exist in physical form (like paper money) and is typically not issued by a central authority.
